ABOUT THE BOOK

i>clicker provides user-friendly technology that enables instructors and students to interact dynamically through question-and-answer polling, and accurately records results to improve learning outcomes. The i>clicker Student Response System (or SRS) is comprised of intuitive software and simple remotes with a primary purpose of increasing interaction in large and small classroom settings. By engaging students, i>clicker helps confirm comprehension, provides the ability to address misconceptions in real-time, and offers formative and summative assessment opportunities. Built by educators, i>clicker seamlessly integrates with all major Learning Management Systems (LMS) and provides comprehensive pedagogical resources so the technology can be used in meaningful ways. REEF Polling is a mobile-optimized engagement system developed by i>clicker. Built from the ground up, REEF Polling is [Read more](#)
